Docker Desktop initializing:

**Docker CLI installation** 

```
Command Prompt
                                                                                                                                                Microsoft Windows [Version 10.0.19044.1766]
(c) Microsoft Corporation. All rights reserved.
C:\Users\ADMIN>docker
Usage: docker [OPTIONS] COMMAND
A self-sufficient runtime for containers
Options:
       --config string
                                  Location of client config files (default
                                   "C:\\Users\\ADMIN\\.docker")
  -c, --context string
                                  Name of the context to use to connect to the
                                   daemon (overrides DOCKER HOST env var and
                                  default context set with "docker context use")
  -D, --debug
                                   Enable debug mode
                                  Daemon socket(s) to connect to
Set the logging level
("debug"|"info"|"warn"|"error"|"fatal")
(default "info")
  -H, --host list
-l, --log-level string
                                  Use TLS; implied by --tlsverify
       --tls
                                  Trust certs signed only by this CA (default "C:\\Users\\ADMIN\\.docker\\ca.pem")
Path to TLS certificate file (default "C:\\Users\\ADMIN\\.docker\\cert.pem")
       --tlscacert string
       --tlscert string
                                  Path to TLS key file (default "C:\\Users\\ADMIN\\.docker\\key.pem")
       --tlskey string
       --tlsverify
                                   Use TLS and verify the remote
   -v, --version
                                   Print version information and quit
```
